

Turkey, Duck & Goose

Single-Stage Incubation

TD&G Special Edition from...

JAMESWAY 

TD&G SPECIAL EDITION

Not every egg makes a chicken! It is time for turkey, duck and goose producers to get the attention they deserve. Jamesway now features a line of machines, automation and accessories tailored especially for the TD&G market.

Our single-stage machine puts the emphasis on the machine to perform the procedures for managing the environment of the incubator. Once the incubation is programmed, you can shut the door until the egg transfer with a simple 10% candling or check of fertility at 9-10 days of incubation.

Temperature, CO₂, air velocity and (in the hatcher) maturity, have all been incorporated to produce excellent quality poults, ducklings and goslings.

The Platinum single-stage machine can maintain egg room conditions until the set is required and it can operate on specifics for that embryo's developing needs. Better hatch results combined with reduction of management time make it easy to see why it has been called "worry free" and why the trend is towards this style of incubation.

Finally, something for every egg.

TD&G - THE MACHINE

The Platinum 2.0 has long been the machine of choice for the TD&G market, with special configuration for your hatch.

Benefits of single-stage incubation for turkeys, ducks and geese

- Program and set many different profiles and modify at any time
- Clean and sanitize between sets
- Easy to keep track of eggs since each weeks hatch is in one machine
- Better and easier control of CO₂ resulting in lower cull rate, better feed conversion, heavier chicks and lower one week mortality
- Shorter hatch window
- No accidental hatches from forgotten trays
- Better alarms and more precise monitoring
- Tighter cabinet for temperature and CO₂ control
- The fan motors are inside with no holes in ceiling for belt drive fans, etc.

Experience a better hatch with a machine that is designed to adapt to the special needs of your embryos

TD&G Special Edition

TD&G - THE ACCESSORIES

Tighten your hatch window and increase your efficiency with these products

Pilot

With Pilot you can use the egg's own shell temperature to establish and set profiles and monitor your hatch. Will work with a turkey or duck 30 egg flat.

HatchSENSE

Hatchsense in the hatcher senses the first hatch and adjusts the environment accordingly, decreasing the hatch window and, consequently, improving hatchling health and increasing hatch size. Customers that have tested HatchSENSE swear by it. Most see the benefits as a reduction in cull poult by 2-3%.

HatchCOM

Hatchcom III has profiles designed for your hatch. Based on the tremendous experience of our hatchery experts, these profiles will get you the best hatch results every time.

RACKS

13 tier racks for every type of egg.

Each rack has its own air cylinder turn control, which means there can be no single point of failure. You can even turn eggs while they are in storage.

SST Flats

For turkey and other types of waterfowl the Jamesway Self Stacking Transport System allows you to transport and incubate the eggs in the same flats, and later, compress the flats for an economical transport back to the farm.

TD&G - THE SPECS

Incubators

Incubator capacity	Egg flat capacity	Small	Medium	Large
Turkey/Duck	25	10,400	20,800	31,200
Turkey/Duck	30	12,480	24,960	37,440
Goose	25	10,400	20,800	31,200

& Hatchers

Hatcher capacity	Small	Medium
Turkey, Duck or Goose	12,480	18,720

THE AUTOMATIC HATCHERY

Beak trimming, toe conditioning, candling: design your hatchery to make your processes as easy as possible. We have the machines to help.

Egg Washing: For those operations which use egg washing to remove the cuticle we have automatic solutions that will make your job much easier...and your staff happier!

Egg Lifter: The semi-automatic egg lifter is suitable for all egg types – goose, turkey, and duck. Its ergonomic and lightweight design is configured for Jamesway 35 and 30 egg flats. The egg lifter reduces the need for workers to handle eggs, which means the risk of damage is also reduced.

Washing: We have a variety of washers available to suit any hatchery need. Create a biosecure and efficient process for returning your trays and baskets to their original cleanliness.

Vaccination: Depending on your needs we have many options for adding vaccination machines to your processes for ducks, turkeys or geese.

SOME OF OUR TD&G CUSTOMERS

"It was not just service on the machines, or attention to the unusual demands of our business, but also problem solving and advice on the best practices for the hatches. Outstanding customer service." **Metzer Farms**, ducks, geese, wild turkeys and guines, USA:

"It was amazing how 'very precise' the machines were. I noticed such an improvement and we have never had such control over our hatches" **Canards Des Monts, Quebec:**

Couvoir UNIK

Did you know?

- 90% of the world's turkey production is done in North America.
- 80% of the those hatcheries use Jamesway equipment!

Five reasons to choose Jamesway for Turkey, Duck & Goose

- 1. Program your hatch:** Our single-stage machines allow you to create set profiles for ANY type of egg
- 2. Fantastic seals:** Because we don't have openings in the roof and our machines have amazing seals, we have the ability to totally control the temperature and CO₂ levels
- 3. Best biosecurity:** Remove all the racks and hardware to totally clean the machine
- 4. Experience:** Our team of hatchery specialists who know the special needs of turkey, duck and goose embryos
- 5. Efficiency and care for our environment:** Low consumption on all resources
