

# Hatchcom 4

Managing your hatchery the Worry Free way

## The latest software to ensure that your hatchery runs smoothly

- more efficient
- easier to use
- more customization
- simple navigation
- faster

Jamesway Software Designers proudly release the latest version of Hatchcom: filled with new features and adaptations to make your hatchery run more efficiently.

*Hatchery Technology from...*

**JAMESWAY** 

## Some of the new features

- Complete redesign of the user interface with a bright new look matching the Platinum interface.
- New scheduled maintenance system allows setting and tracking of one time or recurring preventative maintenance tasks
- Color coded machine status on the layout window provides a quick overview of the status of your machines and rooms.
- Each machine or room displays the actual temperature, humidity, CO<sub>2</sub>, damper, fan speed or HVAC pressure on the layout.
- Requires: 64 bit Windows 7 Professional or later operating system. Use together with other Windows programs such as Microsoft Office, to transfer data. Large icons for touch screen tablets (Windows only).
- Remote PC's or tablets can be networked to the main Hatchcom PC.
- Automatic database backup function keeps data secure. Old database backups can be easily loaded into Hatchcom for inspection.
- All report and graph screens are independent.
- Global actions to quickly apply changes to a group of machines.
- Group machines into rooms to view at one time.
- Easier editing of the hatchery layout screen. New commands allow user to undo changes or arrange a group of machines.
- Incubator profiles and Guardian schedules can be exported for archival purposes or later import.
- Transfer function to copy incubator profile start date for up to four hatchers.
- Integrated manual and context sensitive help in each window allowing user to get up to speed quickly.
- Built-in Modbus server gives read access to third party applications.

## What can Hatchcom do for your hatchery?

Schedule automatic email messages or telephone call outs in the event of alarms.
Monitor and control the operation of all your hatchers and incubators. It will also monitor hatchery rooms when connected to the Guardian HVAC system.
Illustrate, analyze, and troubleshoot machine operation with long term trend-indicating graphs from stored temperature, humidity, damper, and event data. The graph capability is extremely powerful and flexible, allowing information to be displayed in many different formats and resolutions.
Store machine alarms and operator response times to alarms.
Schedule maintenance tasks for incubators, hatchers, HVAC, and other hatchery equipment.
