Egg Flats

Give your eggs the best protection possible

Keeping eggs intact throughout the supply chain

The transportation of eggs is a highly vulnerable process. Unsuitable or poor quality egg flats and cartons could result in significant breakages and loss of profit. Jamesway egg flats protect eggs better than any other comparable product on the market.

Ideal for diverse egg types and sizes

The Jamesway egg flats are plastic egg holders with a sturdy design, a uniform pocket size, and a special cushioning material to ensure your eggs remain intact during transportation and storage. The egg flats are available in a range of shapes and sizes for chicken, duck and turkey eggs. The SST flats are part of a unique transport system (see SST Product Sheet).

Advantages

Reduce time and labor

The egg flats are designed for easy handling to save time and reduce labor costs. The cleverly designed handle of the 168-egg flat is a particularly great labor-saving device.

Protect against breakage

A special material cushions the eggs to protect them against breakage. Ensure hygiene. All egg flats are made from material that is highly resistant to micro-organisms, and easy to clean and disinfect.

Extend egg flat life

These reusable plastic egg flats are strong and durable, and will last for a long life of repeated use.

A variety of solutions to fit your needs

Diverse sizes

Egg flats are available in eight capacities to suit your specific hatchery requirements:

36, 42, 77, 84 and 168 for chicken;
25, 30 and 60 for turkey and duck.

Efficient egg handling

The 168-egg flat for chicken eggs occupies an entire incubator egg tray frame.

Easy to combine

In most cases, different sized egg flats can be used in combination in Jamesway incubators, or flats may be isolated to individual incubators.

A uniform pocket size and special cushioning material combine to reduce egg breakage during transportation.

Jamesway egg flats are also available for 25, 30 or 60 turkey or duck eggs.

The 168-egg flat is a particularly efficient way of transporting large numbers of chicken eggs, eliminating the need for transfer pallets.
