Platinum NEST

Give your new-born chicks a cosy environment before they ship to their new homes.

Your day-old chicks are your most valuable commodity, so treat them well. Jamesway has designed the perfect holding area for your hatchlings.

Because chicks are *poikilothermic* (not completely warm blooded) the ambient temperature has a huge impact on their metabolic rate. Day-old hatchlings are vulnerable to even slight fluctuations in the environment, which can impact their growth.

Minimize any risk to your new hatchlings by providing the perfect holding environment

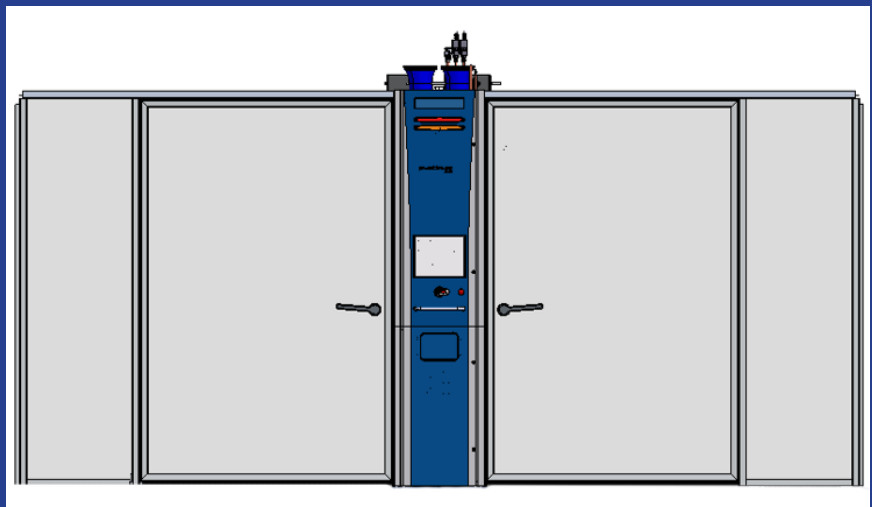

The best place to store your new hatchlings is the Platinum NEST.

The Platinum NEST provides the optimal holding conditions by precisely controlling lights, temperature, humidity, and CO₂ during the time they are held in the hatchery.

You can store more hatchlings per sq. ft. as compared to conventional hatchery DOC storage methods.

No more overheated or chilled chicks in your holding room; no loss of quality.

The NEST improves animal welfare and provides data to document these holding conditions.

HOW WOULD YOUR HATCHERY BENEFIT FROM A JAMESWAY NEST?

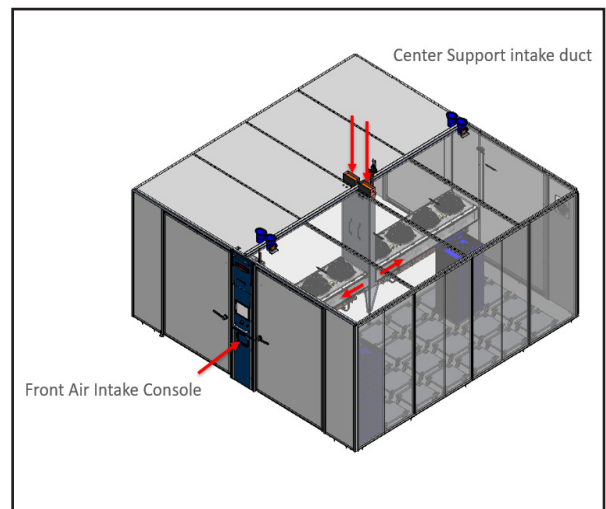

- Controlled environment will safely increase the possible length of storage time
- Hold full and/or partial loads
- Optimize fine tuning (temperature, humidity and CO₂)
- Oxygen and airflow are not easily controlled in a storage room, but you can program the exact mix for your NEST
- Maximize the potential of your newly hatched chicks and reduce loss
- Lighting control with gentle **blue lights**; known to make chicks calm and happy. Ease the brightness up and down to reduce the stress of abrupt light changes

FEATURES

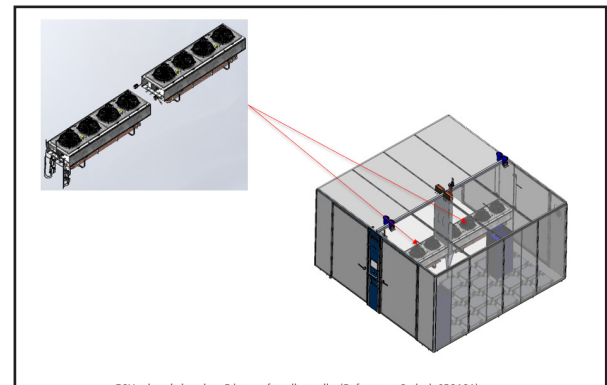

- P120 machine sized – double depth (54 dollies)
- Power exhaust (two rear exhaust fans)
- Increased fresh air supply
- Standard doors on front and rear of machine for easy movement of dollies
- Platinum 2.0 Hatchcom 4 controls
- ECU - electric heating & water cooling
- 5 layers of water-cooling coils
- 2 motorized/variable control valves for cooling system
- No airlines = No turning of eggs

CHICK CAPACITY

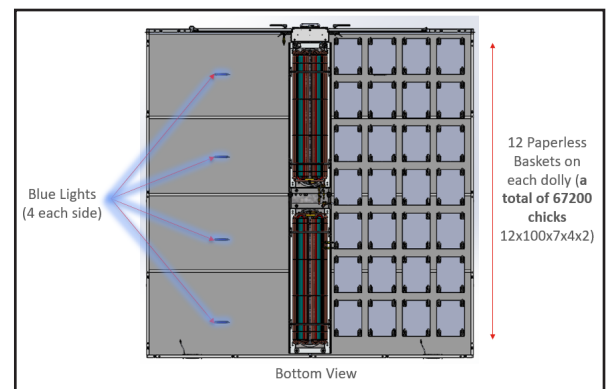

- 67,000+ cheerful and lively day-old chicks

Totally Controlled Environment

Twin ECU units

*Specially controlled **blue lights** produce calm and happy chicks*
